

Course Code: CS301 Database Management Systems Laboratory
Experiment # 2: Types of Constraints in Relational Databases
Department of Computer Science and Engineering
Semester: Fall 2024

Aim:

To write and execute SQL commands to demonstrate PRIMARY KEY, FOREIGN KEY, UNIQUE, and CHECK constraints.

Instructions:

This document provides the SQL commands and expected outcomes for each lab exercise.

You should execute these commands in your SQL environment (MySQL / PostgreSQL) and observe the results.

Procedure:

Step 1: Create table department with primary key dept_id.

Step 2: Create table employee with foreign key dept_id references department.

Step 3: Insert valid records and verify integrity constraint violations.

Expected Outcomes:

Integrity constraint check fails on foreign key mismatch.
